

# WATERFRIEND

## Updating the software in the control unit

The software in the MRD-2 is constantly being developed, expanded and adapted to changing needs. In order for the owners of older devices to be able to participate in this technical progress, the MRD-2 has the option of updating the software in the control even after delivery.

Only a few steps are required for such an update:

1. Disconnect MRD-2 from the power supply.
2. Remove the front cover.
3. Remove the memory card from the board.
4. Download the ZIP archive with the update files from [http://osf.de/download/download.php?dll=Kundenbereich/Updates/MRD2\\_update.zip](http://osf.de/download/download.php?dll=Kundenbereich/Updates/MRD2_update.zip).
5. Unpack all files and directories from the ZIP archive and copy them to the memory card.
6. Insert modified memory card into the socket on the board.
7. Re-mount the front cover.
8. Switch the power supply on again.

The update process will start automatically.

**The electrical connection as well as the work of adjustment and servicing should be carried out only by an approved electrician.**

For a video demonstration of the procedure, see [https://osf.de/download/download.php?dll=Netzwerk/Softwareupdate\\_MRD2.mp4](https://osf.de/download/download.php?dll=Netzwerk/Softwareupdate_MRD2.mp4).
